

### The HARMONY Series

The Harmony series was developed by Mastersoft to assist organisations in meeting the complex and growing data quality issues facing today's organisations. Harmony has been designed and built from the ground up with a goal to provide flexibility, extensibility, adaptability, universal usage and maximum performance.

Harmony is a modular product with each module meeting the requirements of today's demands in customer information data quality. All modules may be implemented to work in unison to provide an Enterprise Approach to managing Address Data Quality or may be implemented as standalone modules.

### HARMONY Statement of Accuracy Generator

In order to maximise the New Zealand Post Volume Post™ (VP) Discounts under the SendRight™ Address Accuracy Programme, an approved Statement of Accuracy (SoA) is required to be provided with each VP lodgement.

The Harmony SoA Generator was the first commercially available software to achieve SendRight™ Certification, it queries your customer address mailing database and reports on the quality as it relates to the SendRight Address Matching rules including:

- ☐ Compliant addresses
- ☐ Valid Addresses
- ☐ Invalid Addresses
- ☐ Base addresses
- ☐ Issue requiring attention

It produces the SoA Certificate in the format required by the SendRight™ Programme, for inclusion with bulk mail lodgements so you can maximise your Postal discount. It is available for the Windows™ platform and is easy to install and use, for more information please contact:
